

CONTENTS

Abstract	1
1. Introduction	2
2. Conditions of Surface Snow in Different Regions of East Antarctica	4
2.1. Mean annual snow accumulations	4
2.2. Height of the surface snow relief	6
2.3. Snow density at the surface	6
2.4. Snow hardness at the surface	6
2.5. Division of the ice sheet along the traverse route	7
3. Topographical and Meteorological Factors Controlling Conditions of Surface Snow	8
3.1. Relationships between conditions of surface snow and the slope inclination	8
3.2. Relationships between the snow density and the slope inclination ...	9
3.3. Dependence of wind speed on the slope inclination	10
3.4. Influence of wind speed on conditions of surface snow	11
3.5. Effects of temperature on the density of snow	12
4. Snow Accumulations in a Region between Syowa Station and Plateau Station	14
4.1. Relationships between snow accumulations and the local topography ..	15
4.2. Comparison of the values of annual snow accumulations measured by stakes and from snow stratigraphy	16
4.3. Ablation and accumulation in summer along the route	16
5. Characteristics of Snow in the Upper 2 m of the Ice Sheet in East Antarctica—Results of Pit Studies	18
5.1. The type and grain size of snow in the upper 2 m	19
5.2. Densification of snow in the upper 2 m of the snow cover	20
6. Distribution of Snow Density in the Upper 10 m of the Ice Sheet along the Route of 40–43°E—Results of Snow Core Analyses	22
6.1. Change of regional profiles of snow density with depth	23
6.2. Relationships between the snow density at 5 and 9 m depths and the mean annual air temperature	24
7. Conclusions	26
